

The Home Network 2025

Eye Networks Fagdagur 2017

Jan Pedro Tumusok
General Manager

Welcome

- One & half days with a diverse set of speakers
- Lawyers, developers, teachers and more.
- Themes ranging from new tech to new laws to cool use cases.
- Last but not least we celebration 20 years of Wifi

The Home Network 2025

- Our speakers will give us a glimpse of the future they see coming and what they think of the future.
- What is the Eye Networks point of view?

What do we expect?

- More devices per person and per household
- More services per household, we are talking micro-services by the dozens.
- Personal devices
 - Phones, Tablets, Computers and wearables

What do we expect?

- Household devices
 - Online appliances being branded as IOT devices
- Private and public sensors / data collectors for Big Data, Machine Learning and AI

What do we expect?

- Automation and ZeroConf
- IPv6 (at least we hope ☺)

What needs to happen?

- Privacy and security, must be a key fundamental and not an afterthought
 - Mirai "broke" the internet twice!!
 - EU privacy rules can bankrupt a transgressor
- Complexity must be abstracted into easy and usable solutions. More complexity = less usage

What needs to happen?

- Internet Service Providers needs to re-capture the declining ARPU, if not QoE will suffer for all providers.
- Triple play monolithic services, needs to be supplemented/replaced by new services, micro services are the low hanging fruit.

What needs to happen?

- Users needs to know and feel that their safe and that their data is safe.
- Users needs to have an understandable and easy to use solutions.

The future is here?

- We already see some of the shape our future is taking.
- Today and tomorrow, we will learn more details from more people on how they perceive it and also what you can build your future on and with.

My safe bet?

There will be Cake!

(Maybe not in 2015, but 25.04.2017)
